C;Comment: This inhibitory fragment, released from native ITI after limited
C;Comment: The anino acid at position P2' (19-Met) appears to determine the speci
delastase; those with leucine interact strongly.

C:Comment: This protein inhibits the activities of factor Xa and tissue factor—from C:Superfamily: tissue factor pathway inhibitor; animal Kunitz-type proteinase inhibitor
C:Keywords: anticoagulant; glycoprotein; serine proteinase inhibitor
F:1-80/Domain: signal sequence #status predicted <SIG:
F:29-304/Product: tissue factor pathway inhibitor homology <BP1>
F:54-104/Domain: animal Kunitz-type proteinase inhibitor homology <BP2>
F:217-25/Domain: animal Kunitz-type proteinase inhibitor homology <BP2>
F:217-267/Domain: animal Kunitz-type proteinase inhibitor homology <BP2>
F:54-104,63-87,79-100,125-175,134-158,150-171,217-267,226-250,242-263/Disulfide bonds
F:135/Inhibitory site: Lys (coagulation factor VII/tissue factor complex) #status predicted
F:145,195,256/Binding site: carbohydrate (Asn) (covalent) #status predicted
F:227/Inhibitory site: Arg (unidentified proteinase) #status predicted

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    number of hits satisfying chosen parameters:

BIOPHYS. ACTA 1209:286-292(1994).

IF FUNCTION: ALPHA-1-MICROGLOBULIN OCCURS IN MANY PHYSIOLOGICAL FUNCTION: ALPHA-1-MICROGLOBULIN OCCURS IN MANY PHYSIOLOGICAL PLUIDS INCLUDING PLASMA, URINE, AND CEREBROSPINAL FLUID. IT APPEARS NOT ONLY AS A FREE MONOMER BUT ALSO IN COMPLEXES WITH AND ALBUMIN (BY SIMILARITY).

AND ALBUMIN (BY SIMILARITY).

IF FUNCTION: INTER-ALPHA-TRYPSIN INHIBITOR, PRESENT IN PLASMA AND LYSOSOMAL GRANULOCYTIC URINE, INHIBITS TRYPSIN, PLASMAIN, AND LYSOSOMAL GRANULOCYTIC PLASTASE (BY SIMILARITY).

ELASTASE (BY SIMILARITY).

IF PRM: THE PRECURSOR IS PROTECULTICALLY PROCESSED INTO TWO SEPARATELY FUNCTIONING PROTEINS.

SEPARATELY FUNCTIONING PROTEINS.

IF PRM: HC CONTAINS A COVALENTLY LINKED BROWN-YELLOW CHROMOPHORE CIMILABITY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ide H., Itoh H., Nawa Y.; "Sequencing of cDNAs encoding alpha 1-microglobulin/bikunin of Mongolian gerbil and Syrian golden hamster in comparison with I

-I- SUBUNIT: INTER-ALPHA-TRYPSIN INHIBITOR CONSIST OF A LIGHT CHAIN AND AN HEAVY CHAIN. THERE ARE THREE DIFFERENT HEAVY CHAINS.

-I- PTM: THE PRECURSOR IS PROTECULATICALLY PROCESSED INTO TWO

-I- PTM: HC CONTAINS A COVALENTLY LINKED BROWN-YELLOW CHROMOPHORE.

-I- PTM: ADDITION OF GLYCOSAMINOGLYCAN CHONDROITIN SULFATE, ALLOWS.

-I- MISCELLANEOUS: IN VITRO, THE DIFFERENT COMPONENTS.

-I- MISCELLANEOUS: IN VITRO, THE FIRST TWELVE RESIDUES OF THE AMINO INHIBITING THE ACTIVITY OF A NUMBER OF ENZYMES. ITS IN VIVO FUNCTION IS NOT KNOWN.

-I- SIMILARITY: IN THE N-TERMINAL SECTION: BELONGS TO THE LIPOCALIN FRAMTLY

FUNCTION: INHIBITS FACTOR X (X(A)) DIRECTLY AND, IN A XA-DEPENDENT WAY, INHIBITS VII(A)/TISSUE FACTOR ACTIVITY, PRESUMABLY BY FORMING A QUATERNARY X(A)/LACI/VII(A)/TF COMPLEX. IT POSSESSES AN ANTITHROMBOTIC ACTION AND ALSO THE ABILITY TO ASSOCIATE WITH LIPOPROTEINS IN PLASMA.

LIPOPROTEINS IN PLASMA.

DOMAIN: THIS INHIBITOR CONTAINS THREE INHIBITORY DOMAINS.

- PTM: O-GLIZCOSYLATED (BY SIMILARITY).

SIMILARITY: BELONGS TO THE BETI/KUNITZ FAMILY OF INHIBITORS.

HIGHLY SIMILAR TO TEP2.
                                                                                                                                                           Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ween the Swiss Institute of Bioinf

IT APPEARS NOT ONLY AS A FREE MONOMER BUT ALSO IN COMPLEXES WITH 1 AND ALBUMIN (BY SIMILARITY).

FUNCTION: INVER-ALPHA-TRYPSIN INHIBITOR, PRESENT IN PLASMA AND URINE, INHIBITS TRYPSIN, PLASMIN, AND LYSOSOMAL GRANULOCYTIC ELASTASE (BY SIMILARITY).

PIM: THE PRECURSOR IS PROTEOLYTICALLY PROCESSED INTO TWO SEPARATELY FUNCTIONING PROTEINS.

PIM: HC CONTAINS A COVALENTLY LINKED BROWN-YELLOW CHROMOPHORE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           European Bioinformatics Institute.
